## Summary

---

Experienced MERN stack developer focused on delivering end-to-end web solutions. Adept at creating dynamic front-end interfaces with React and architecting server-side logic and APIs using Node.js and Express. Demonstrated ability to lead development projects including database design and cloud deployment, driving functional and user-centric applications.

## Education

---

**Poornima College of Engineering**

**08/2019-03/2024**

Computer Science

**Emmanuel Mission High School**

**03/2016-03/2018**

Science And Mathematics

## Skills

---

**Frontend:** React js, Next js, Bootstrap, Html, css, Javascript, Redux, Context, Es6.

**Backend:** Node js, PHP, Python.

**Database:** MongoDB, Dynamodb, MySql, Redis.

**Cloud Services:** Aws Serverless, Aws Cognito, AWS Lambda, Firebase, Heroku, Vercel, Netlify.

**Development Tools:** Github, Jira, Trello, [Sanity io](#).

**Project Management:** Task Tracking, Resource Allocation, Stakeholder Communication, Risk Management.  
**Additional Skills:** Linux Server Handling.

## Experience

---

### Freelance Developer

Freelance Developer & Tech Consultant

Remote

01/2024 - 12/2025

Partnered with diverse businesses to architect cutting-edge digital solutions. Delivered strategic tech consulting, translating complex business challenges into scalable applications. Built and optimized 15+ production websites, driving measurable business impact and revenue growth for clients across multiple industries.

### Polysports

Associate Software Developer

Remote

07/2023 - 01/2024

Partnered with diverse businesses to architect cutting-edge digital solutions. Delivered strategic tech consulting, translating complex business challenges into scalable applications. Built and optimized 15+ production websites, driving measurable business impact and revenue growth for clients across multiple industries.

### Ideasailor Technologies

Backend Developer And project Coordinator

Remote

07/2023 - 01/2024

**Bhoomi – Real Estate Broker Chain Project:** Oversaw the development of a comprehensive real estate platform. Coordinated the team responsible for creating APIs, managing server-side logic, handling the authentication process, and ensuring smooth process logic for brokers. Additionally, led the development of APIs for the admin panel.

**Manago Foods – Online Food Ordering & Delivery:** Managed the complete backend infrastructure. Coordinated the development of APIs for everything from authentication to order processing. Supervised the team responsible for building the admin backend and vendor order management system.

**Hokart Foods – Bulk Food Ordering Application:** Directed the full-stack development. Coordinated backend operations for order management and ensured that various APIs were created to meet project requirements.

IWW India – Online Bookstore: Managed operations including online content management and data provision for client analysis. Led a team of developers, provided technical guidance, and ensured timely project delivery while maintaining high-quality standards.

Technologies Used: Node.js, Express, MongoDB, PostgreSQL, Redis, AWS, Docker

## Projects

---

### Mypg.life

MyPG.Life is a comprehensive accommodation rental website that simplifies the process of finding shared and personal rooms based on user preferences and budget. The platform offers a seamless browsing and booking experience tailored to meet diverse user requirements.

**Key Features:**

- Advanced filtering based on budget, location, and amenities
- Flexible pricing options and dynamic pricing models
- User-friendly room listings with detailed descriptions and images
- Secure booking and payment integration
- Real-time availability tracking
- User reviews and ratings system

Technologies: React.js, Node.js, MongoDB, Payment Gateway Integration

### Blog Website

A complete blog platform featuring comprehensive frontend and backend with intuitive onboarding and powerful blog posting capabilities. Designed for content creators and writers who need an easy-to-use publishing platform.

**Key Features:**

- Smooth user onboarding and registration flow
- Rich text editor for blog post creation
- Category and tagging system
- Comment system with moderation
- User authentication and authorization
- Search and filtering capabilities
- SEO-optimized blog pages

Technologies: React.js, Node.js, Express, MongoDB, JWT Authentication

### Ecommerce Platform

A robust e-commerce platform built with modern technologies, featuring comprehensive product management, secure payment processing, and advanced order tracking capabilities.

**Key Features:**

- Dynamic product listings with filtering and sorting
- Shopping cart with persistent storage
- Secure payment gateway integration
- Real-time order tracking
- User account management and order history
- Admin dashboard for product management
- Inventory management system
- Email notifications for orders

Technologies: React.js, Node.js, MongoDB, Stripe, Express

## Manago Foods Backend

Developed a scalable backend system for an online food ordering platform (Manago Foods) with robust order management and payment processing capabilities.

Key Features:

- Order management and tracking system
- Real-time payment processing
- Restaurant management APIs
- Delivery tracking integration
- Customer and restaurant authentication
- Analytics and reporting system
- Notification system for orders
- Scalable architecture for high traffic

Technologies: Node.js, Express, MongoDB, Payment Gateways, Redis

## Insezero Backend

Created a powerful backend infrastructure for a data visualization and real-time analytics platform, enabling users to gain insights from complex datasets.

Key Features:

- Real-time data processing and aggregation
- Advanced analytics APIs
- Data visualization endpoints
- Custom dashboard data generation
- Time-series data management
- Performance optimization for large datasets
- Export functionality (CSV, PDF)
- User access control and permissions

Technologies: Node.js, MongoDB, Express, D3.js Integration

## Hesabay Pay Integration

Integrated Hesabay Pay, a secure payment processing solution supporting multiple currencies and payment methods for various applications.

Key Features:

- Multi-currency payment support

- Secure transaction processing
- PCI compliance and data security
- Webhook integration for payment updates
- Transaction reconciliation
- Refund and dispute handling
- Payment history and reporting
- Support for multiple payment methods

Technologies: Node.js, REST APIs, Crypto Payments, Webhook.

## **Addnex**

Developed digital ad platform with campaign management and analytics.
